# CHAPTER 2

---

## Test Builds

---

This repository is used internally to create different scenarios on build configs and trigger many builds on Read the Docs productions.

Each branch should explain on it's `docs/index.rst` what's about and how the QA process can be considered a success or a failure.

If we need to test a very specific use case, we create a new branch with the issue number and the repository, like: `issue-1234-org`, `issue-4321-ext` or similar.

### 2.1 Scenarios

Each of these scenarios is a branch that can be built independently from the others.

Please, check [all the branches](#) and [all the tags](#) to be sure.

### 2.2 Adding a new scenario to the repository

1. Create a new branch from `master` using an appropriate name
2. Explain what's the use case in its `docs/index.rst` file
  - How to check if the QA can be considered success or failure
  - Add links to the issue tracker where there are more information
3. Add or modify the necessary files
  - Make sure that these files contain the minimum configuration needed:
    - remove auto generated comments
    - configs not used
4. Push your changes

## Test Builds

---

Sphinx configuration file used to build this docs (*see full file*),

```
1 # -*- coding: utf-8 -*-
2
3 # Default settings
4 project = 'Test Builds'
5 extensions = [
6     'sphinx_autorun',
7 ]
8
9 latex_engine = 'xelatex' # allow us to build Unicode chars
10
11
12 # Include all your settings here
13 html_theme = 'sphinx_rtd_theme'
14
15
16
17
```

```
>>> # Build at
>>> import datetime
>>> datetime.datetime.utcnow() # UTC
datetime.datetime(2020, 11, 10, 16, 52, 22, 24203)
```
