CONTENTS

Uses tectonic to build a PDF after generating the .tex file with Sphinx (<https://tectonic-typesetting.github.io/en-US/>)

See the issue <https://github.com/readthedocs/readthedocs.org/issues/9598>

Read the Docs configuration file

```

1 version: 2
2
3 build:
4   # tectonic requires an older version of libssl
5   # We cannot upgrade to 22.04
6   os: ubuntu-20.04
7   tools:
8     python: "3"
9   jobs:
10    post_build:
11      # https://tectonic-typesetting.github.io/en-US/install.html
12      - curl --proto '=https' --tlsv1.2 -fsSL https://drop-sh.fullyjustified.net | sh
13      - python -m sphinx -T -E -j auto -b latex -d _build/doctrees -D language=en docs/ _
14      ↪ readthedocs/latex
15      - ./tectonic -X compile _readthedocs/latex/$READTHEDOCS_PROJECT.tex
16      - mkdir --parents _readthedocs/pdf
17      - mv _readthedocs/latex/$READTHEDOCS_PROJECT.pdf _readthedocs/pdf/$READTHEDOCS_
18      ↪ PROJECT.pdf
